Vulnerability Assessment Report

1. Introduction

This report presents the vulnerability assessment conducted on the test website testphp.vulnweb.com.

2. Objective

To identify security vulnerabilities and classify associated risks.

3. Scope

The assessment was performed only on a publicly available test website.

4. Tools Used

- Nmap
- OWASP ZAP

5. Methodology

Port scanning and passive web vulnerability analysis were performed.

6. Findings

Finding 1: Open HTTP Port (80)

Description:
Port 80 is open and running nginx 1.19.0.

Risk Level: Medium

Impact:
Data transmitted over HTTP can be intercepted.

Recommendation:
Implement HTTPS with SSL certificate.

Finding 2: Server Version Disclosure

Description:
The server version nginx 1.19.0 is publicly visible.

Risk Level: Low

Impact:
Attackers may exploit known vulnerabilities in this version.

Recommendation:
Disable server version disclosure.

---

7. Conclusion

The website contains moderate security risks that require remediation.

Screenshot:

```
PORT   STATE SERVICE VERSION
80/tcp open  http    nginx 1.19.0
|_http-title: Home of Acunetix Art
```
